1. The following is an examiner's statement of reasons for allowance: The prior art of record, Deaton, Gupta, and the Electronic Engineering Times article does not teach either singly or in combination an automated sales promotion selection system comprising an input device, a computer system, an output device, and a storage unit including a purchase advisor neural network and which further includes a customer demographics neural network that estimates buying characteristics of one or more customers most likely to be at a purchase location, and also produces item identifiers comprising the estimated item purchases of the estimated customers.

The prior art of record does not teach either singly or in combination an apparatus comprising a storage unit, a central processing unit, a purchase advisor neural network, and a plurality of item identifiers stored in the storage unit, the item identifiers identifying items available for purchase, wherein the customer data includes data relating to purchases of items by the customer, and wherein the purchase advisor neural network is configured to identify the sales promotion by determining if one or more of the item identifiers stored in the storage unit corresponds to an item likely to be purchased by the customer, wherein the storage unit further includes a customer demographics neural network that estimates buying characteristics of one or more customers most likely to be at a purchase location, and also produces item identifiers comprising the estimated item purchases of the estimated customers.

The prior art of record does not teach either singly or in combination a method of dynamically identifying sales opportunities for purchases of items by customers from an inventory of items comprising training a purchase advisor neural network, generating

Art Unit: 3622

sales opportunity output, selecting a set of item identifiers from among the sales opportunity output generated by the purchase advisor neural network as potential purchases from the inventory of items comprising estimating buying characteristics of one or more customers most likely to be at a purchase location and estimating item identifiers of items most likely to be purchased by the estimated customers, and selectively adapting the response of the purchase advisor neural network.

The prior art of record does not teach either singly or in combination a method of dynamically identifying sales opportunities for purchases of items by customers from an inventory of items comprising training a purchase advisor neural network; providing the trained purchase advisor neural network with customer data comprising training a demographics neural network that generates an output set of data defining predicted purchases of customers during a purchasing transaction, providing the trained demographics neural network with prediction data comprising the current date, current time of day, and environmental information and generating with the demographics neural network predicted customer purchases; generating sales opportunity output; selecting a set of item identifiers from among the sales opportunity output generated by the purchase advisor neural network; and selectively adapting the response of the purchase advisor neural network.

The prior art of record does not teach either singly or in combination a method of dynamically identifying a sales opportunity for a customer comprising: receiving customer data; generating with a purchase advisor neural network a sales opportunity; selectively adapting the response of the purchase advisor neural network; providing a

Art Unit: 3622

demographics neural network with prediction data comprising the current date, time of day, and environmental information; and generating with the demographics neural network an output set of data defining predicted purchases of customers during a purchasing transaction based upon the prediction data.

The primary reasons for allowance stated above reflect the inclusion of claim language which was previously objected. The claims have been considered as a whole in determining the reasons for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gupta, WO 93/04449 teaches use of a neural network in providing advertisements or suggested products to the customer (p. 38).
